DETAILED ACTION

This office action is in response to the amendment filed on July 5, 2002.

Accordingly, claim 6 was amended and new claims 25-31 were added. Currently, claims 1-31 are pending in this application.

Response to Arguments

Applicant's arguments with respect to claims 1-24 have been considered but are moot in view of the following Election/Restriction requirement.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11 and 25-31, drawn to a memory module socket, classified in class 439, subclass 61.
- II. Claim 17, drawn to a memory module, classified in class 257, subclass 685.
- III. Claims 12-16 and 18-24, drawn to a memory system, classified in class 365, subclass 52.

The inventions are distinct, each from the other because of the following reasons:

Inventions III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the details of the socket of Invention I do not constitute the sole distinguishing

Art Unit: 2822

feature of the memory system of Invention III. The subcombination has separate utility such as using the sockets to connect microprocessors instead of memory modules.

Inventions II and III or I are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions as required by Invention II, claim 17, include "a printed circuit board" and "four contacts" which are not required by the other inventions.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or III, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
